Use the Optimizer inks from EMBLEM

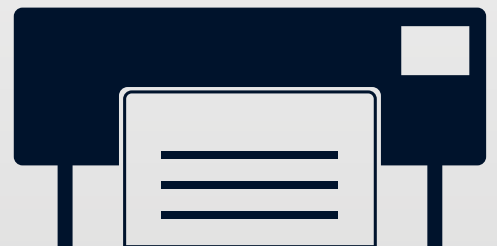

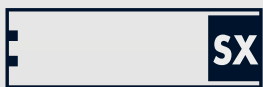

EMBLEM OPTIMIZER M-64 large format printer inks are specially have been developed for use in the Colorpainter M-64s.

- Developed with the same quality requirements as inks from the printer manufacturer
- Low odour formulation
- Colour matching to the printer manufacturer's inks, eliminating the need for user-defined profiles are not available in most applications
- Fully compatible - simply by using an OPTIMIZER Replace M-64 bag when printer manufacturer's ink bag is empty
- Designed for high printing speed
- Highly effective, highly intensive colours
- Consistent and reliable print performance

Ink change

When switching to Optimizer M-64 bags, users should remove the printer manufacturer's ink, replace it with OPTIMIZER M-64 ink and continue printing. This can be done either one colour at a time or all colours together. This saves time and money as there is no need to perform unnecessary ink filling procedures or dispose of unused ink. No complete ink fills are required.

Remove the ink cartridge.
There are no rinses required.

Install the EMBLEM Ink cartridge.
Not all of them have to be can be changed.

Continue printing.

Cleaning

Use the cleaning fluid with part number 26392 OSI-M64-FL1000 for the most effective removal of ink incrustations and cleaning of assemblies in the printer that come into contact with ink. Avoid contact with the skin. Wear approved safety glasses and suitable gloves when using the cleaning fluid. Read the safety data sheet for further safety precautions.

Consumption periods/max. storage time

The recommended shelf life of this product is 15 months from the production date when stored under standard storage and transport conditions (between 5 - 25 °C).

Durability of outdoor prints

OPTIMIZER M-64 inks are designed for maximum outdoor durability against colour fading and chemical attack caused by the combined effects of UV radiation and environmental pollution. Each colour contains long-lasting pigments for outdoor use.

If the EMBLEM inks are used with correct colour management, the colour deviation of the original print density over a period of 24 months in vertical sunlight is minimal.
