Different printers, inks, resolutions and printing qualities result into numerous different printing parameters. In addition, there are numerous factors influencing processing and the application of our materials. For this reason, we cannot make specific statements as to drying times and maximum ink absorption. For this reason, we recommend you to perform own tests in order to verify the desired results. Our product specifications are not to be understood as legally binding guarantees assuring specific characteristics. Any liabilities and guarantees, as well as claims for compensation beyond the value of the product itself are excluded.

Water Photopaper New Generation Semimatt 250

Description:

EMBLEM Water Photopaper New Generation Semimatt 250 is a universal, double-sided PE-coated, satin-finish photo paper for high-quality indoor poster and photo applications. The microporous coating has been specially developed for water-based ink systems and enables fast drying with high colour brilliance and a wide colour gamut. The paper impresses with its excellent colour reproduction, high resolution and precise edge sharpness. Thanks to its high ink limit and FSC®-certified base material, Water Photopaper New Generation Semimatt 250 offers outstanding print quality at an attractive price-performance ratio.

Processing:

For protection against mechanical abrasion we recommend using a cold lamination film. Every print which has been produced with dye-based ink has to be laminated to protect it against gas-fading. To avoid mechanical influences lamination of the film is advised.

After printing we recommend to store the remaining roll in the closed original packing in a cool and dry environment.

To avoid fingerprints the use of cotton gloves is advised.

Application:

Photography, Portrait, Posters, Graphic Art Reproduction, indoor Signage
